

## *ATS 1 way cam ring set for 87mm disc LSD (R7A15-41)*

45 degree

55degree

70 degree

The set comes with a set of cam rings and a special cross axis

ATS has released a 1-Way Cam Ring Set for 87mm disc LSD. (ATS LSDs made for Honda / Acura FF, Mitsubishi Evo, and Toyota AE86 & Celica all have an 87mm disc.)

There are three cam angles on each ring with a 45 degree, 55 degree, and 70 degree angles and with these options, a driver can choose the desired cam angle to fit his/her driving situation. The higher the cam angle, the more responsive the LSD becomes.

You can convert an existing 1.5-Way LSD to a 1-Way LSD by replacing the internal rings and the cross axis with this kit. While utilizing a 1-Way Cam, the LSD will not activate on deceleration. You can also order a new LSD with the 1-Way Cam ring kit that will be factory installed at ATS factory.

The 1-Way Cam Rings must be used with the cross axis (model # 37149-42) that is included in the kit and cannot be used with other axis's.

Model # R7A15-41

Price (Retail) \$295.00

Please add \$135.00 to the price of a standard 87mm LSD and \$45.00 to the price of an 87mm Super Silent LSD if you would like to purchase a new fully installed LSD with this kit.
