

Silent Carbon Clutch for 350Z w/ DE engine

ATS and Super Autobacs have been jointly working on the manufacturing of a new version of a high drivability carbon clutch. The challenge that ATS faced was to create a carbon clutch for 350Z which; 1) Can hold power at 500 horsepower - the Super Autobacs 350Z has a super charger with power well above 450 ps, 2) Does not have "hauling" or gear noise from the transmission when in a idle mode to a low range RPM , 3) Eliminates much of the shuddering, 4) The ATS Carbon Clutch maintains an excellent engagement characteristic.

Now the Silent Carbon Clutch has received approval from the Super Autobacs and professional driver Mr. Mitsuhiro Kinoshita, and it is ready for sales now.

In order to eliminate the unwanted harmonics and hauling noise, ATS decided to use a stock double mass flywheel. In addition, a soft type (Type S) internal discs is used to significantly reduce shuddering. At the moment, the silent carbon clutch for 350Z has only a twin model and with a 500 ps rated horse power at the wheel with a 1,100kg clamping force. (1,350kg clamping force is also available).

Suggested retail price—\$3,035.00, new bearing & bearing sleeve, shipping are included.

The silent carbon clutch for 350Z w/ HR engine is coming this summer (2009).
